

ShipSnap™

The next generation of delivery management is here.

Product Type: Fleet Optimization ERP Module with companion mobile app

ShipSnap® is your answer to managing a growing fleet of last-mile delivery vehicles with higher efficiency, route transparency, and simpler billing using your existing ERP or accounting software.

HOW IT WORKS:

Fleet Management

At the end of every business day, ShipSnap® analyzes orders to create an optimized delivery plan using factors such as weight, gas mileage, and vehicle capacity. Orders are organized and displayed in the app on each driver's tablet and include photo capture and signature fields.

Proof of Delivery

With TrueProof® Delivery, all information including date, time, location, signature, and photo are captured in an indisputable record saved within a digital archive or directly within your ERP and easily accessible whenever a question of delivery is in dispute.

Billing & Bookkeeping

ShipSnap® integrates with SAP Business One, Oracle, Netsuite, Quickbooks, and other ERP systems, seamlessly assembling delivery details and confirmation into your existing customer record, allowing one-click invoicing and eliminating paper billing and bookkeeping.

SHIPSNAP™
powered by SPS

Paperless Bookkeeping

Manage billing up to 8X faster, eliminating paper with built-in archive and one-click invoicing

Increased Driver Efficiency

Increase driver efficiency while eliminating mistakes and disputes

Route Optimization

Automatically optimize routes based on vehicle size

Expedited Hand-off

Automated customer texts alert recipients of truck arrival time

TrueProof® Technology

Proof of delivery including support for various digital signatures synced to your ERP system in real-time
