

ShipSnap QR

Proof of delivery for drivers you don't employ: the recipient scans a QR code on the delivery note and signs on their own phone.

Any driver

No app

QR on the note

ERP sync

Business outcome

Every delivery ends with a signed, time-stamped record in the ERP - no matter who delivered it. Fewer delivery disputes, faster invoicing, and no paper to collect, scan or store.

Core capabilities

- A QR code for each order, added automatically to the delivery note or label.
- The recipient scans it with their own phone - a signature field and photo capture open in the browser.
- Date, time, location, signature and photo are captured in one record.
- Works with third-party carriers, couriers and subcontractors - no app or login for the driver.

Workflow + integration

- The QR code is added when the document prints, through Winsert - no change to the ERP's document layouts.
- The signed document syncs to the order and customer record in SAP Business One or the ERP you run.
