

Winsert

A central document-processing and integration hub that captures information, applies business logic and coordinates data exchange across systems.

Multi-channel capture

Data extraction

Business rules

System integration

Business outcome

Winsert turns documents and data into automated business processes. It connects previously fragmented inputs, decisions and enterprise systems so information can move reliably without repetitive manual handling.

Core capabilities

- Capture documents through virtual printers, monitored folders, email inboxes, SFTP servers and other endpoints.
- Analyze content, extract business data and query databases or third-party systems.
- Apply custom scripts, validation logic and business rules to trigger automated actions.
- Add content, modify layouts, split or merge documents, and convert file formats.

Workflow + integration

- Connect SPS products including ShipSnap, DocCycle and DocReader with ERP, CRM and other enterprise platforms.
- Serve as a reusable integration layer for document, print and interface-based workflows.
