Print automation

Business outcome

xPress3 converts operational data into accurate, production-ready labels and barcodes. It reduces manual preparation, standardizes label output and enables teams to print current information directly at the point of work.

Core capabilities

- Generate labels, barcodes and dynamic images from real-time ERP and database records.
- Design and customize label layouts through a graphical interface.
- Operate as an integrated solution or as a standalone application.
- Import data directly from Excel, CSV and ASCII files for flexible production workflows.

Workflow + integration

- Connect to web-based and cloud applications to retrieve current data for immediate printing.
- Support centralized label logic across operational systems, data sources and connected printers
